

ADF Antenna S72-1712-13

Description

S72-1712-13: The ADF ARINC 712 digital receiver uses a combined loop/sense antenna for operation with a digital ADF receiver incorporated within the radome. The ferrite loop is a unique design that provides repeated bearing accuracy. A test loop feature is provided on pin numbers 15 and 16. Compatible with Honeywell and Collins ARINC 712 specifications. Designed for Boeing 777 with a baseplate radius of 84.5 inches. This antenna includes captive mounting screws and with an anti-static black finish.

FEDERAL & MILITARY SPECS: FAA TSO-C41c, ARINC-712, DO-160A, and MIL-E-5400.
